

Le Guan

CONTACT INFORMATION	551 Boyd Graduate Studies Research Center Department of Computer Science The University of Georgia, GA, US	814-883-0450 leguan@cs.uga.edu https://guanle.org/
RESEARCH INTERESTS	My research interests cover a wide range of systems security, including mobile security and IoT systems security. I am especially interested in leveraging COTS hardware components/features to design and build systems that are more reliable and secure than solutions based on software alone.	
EDUCATION	Institute of Information Engineering, Chinese Academy of Sciences, China <ul style="list-style-type: none">• PhD. / Computer Science• Advisors: Jiwu Jing/Jingqiang Lin <i>Sept. 2009 - Jan. 2015</i> University of Science and Technology of China, China <ul style="list-style-type: none">• B.Eng. / Computer Science and Engineering <i>Sept. 2005 - May 2009</i>	
EXPERIENCE AND PROJECTS	The University of Georgia <i>November 2018 - current</i> <ul style="list-style-type: none">• Assistant Professor Pennsylvania State University <i>April 2015 - October 2018</i> <ul style="list-style-type: none">• Postdoctoral Researcher• Advisors: Peng Liu• Projects<ul style="list-style-type: none">– IoT Security <i>2017 - Present</i><ul style="list-style-type: none">– Security mechanisms in the low-end ARM microcontroller, which powers considerable number of IoT devices, are surprisingly weak. This on-going research aims to analyze vulnerabilities residing on these low-end devices, and seek lightweight design to enhance the security of these devices.– TrustZone-based System Security <i>2015 - 2017</i><ul style="list-style-type: none">– TrustZone is a security extension to ARM devices. We novelly utilize it to achieve many security functions that go beyond its conventional usage. We used it to protect legacy programs, to encrypt memory, and to deploy bare-metal malware analysis platforms.– This research has led to two paper publications in <i>MobiSys</i> and <i>ACSAC</i>, as well as three papers under review. Chinese Academy of Sciences <i>Sept. 2010 - Jan. 2015</i> <ul style="list-style-type: none">• Research Assistant• Projects<ul style="list-style-type: none">– Defeating Cold Boot Attacks with Cache <i>2013 - 2015</i><ul style="list-style-type: none">– We creatively leveraged processor cache to temporarily hold keys during a cryptographic computation. The solution eliminates the occurrences of keys in the vulnerable DRAM chip, thus defeating cold boot attacks.– This project has led to three paper publications in <i>Oakland</i>, <i>NDSS</i> and <i>TDSC</i>.– Ultra-high Speed Cryptographic Machine <i>2013 - 2014</i>	

- We developed a hardware security module capable of processing more than 500,000 times ECDSA signatures per second, owing to the highly optimized GPU implementation.
- This project won the first prize of Ministerial Award for Science and Technology Progress of Cryptography in China.
- PKI Inter-operation 2012 - 2012
 - We developed a system that measures the inter-operation ability of both PKI server and client. I wrote an OCSP server and a LDAP crawler that dumps all certificates given a URL.

HONORS AND
AWARDS

Best Paper Award of ACSAC 2017 (2 out of 244 submissions)	<i>2017</i>
National Scholarship (top 0.2% nationwide)	<i>2013</i>
Institute Director Award of Institute of Information Engineering	<i>2013</i>
Merit Student of University of Chinese Academy of Sciences	<i>2012</i>
Outstanding Undergraduate Thesis Award of University of Science and Technology of China (top 5%)	<i>2009</i>
Outstanding Graduate of University of Science and Technology of China (top 15%)	<i>2009</i>
National Endeavor Scholarship of University of Science and Technology of China	<i>2008</i>
Outstanding Student Scholarship of University of Science and Technology of China	<i>2007</i>
Outstanding Freshman Scholarship of University of Science and Technology of China	<i>2005</i>
